- Industrial Equipments

Quick Pregnancy Test (Urine)

HCG Pregnancy Rapid Test Midstream is a rapid, one-step lateral flow immunoassay in midstream format for the qualitative detection of human chorionic gonadotropin (HCG) in urine to aid in the detection of pregnancy.

INSTRUCTIONS

- Remove the midstream from the foil pouch and test them immediately in one hour.
- Take down the cap of the midstream, hold the midstream so as to place the absorbent tip in the urine stream or place the absorbent tip ($\geq 3/2$) in urine in a clean cup for at least 15 seconds.
- Cover the cap on the testing midstream, then lay down the product on a clean and stable desk, start the timer immediately.
- Read the result at 3 minutes; don't interpret the result after 10 minutes.

Reading the result

POSITIVE

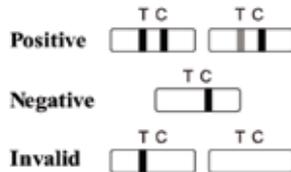

• **Two distinct colored lines appear.** One line should be in the control line region (C) and another line should be in the test line region (T). One line may be lighter than the other; they do not have to match. This means that you are probably pregnant.

NEGATIVE

• **One colored line appears in the control line region (C).** No line appears in the test line region (T). This means that you are probably not pregnant.

INVALID

• **The result is invalid if no colored line appears** in the Control Line Region, even if a line appears in the Test Line Region. You should repeat the procedure with a new test: this is different from what is written in the insert.

Accu-test

"The world's first 'rapid' pregnancy test giving an accurate result.."

**There is the possibility that this test midstream may produce false results. Consult your physician before making any medical decisions.*

HCG Pregnancy Rapid Test Cassette (Urine)

Accu-test

"The world's first 'rapid' pregnancy test giving an accurate result.."

Results in 3 Minute HCG Sensitive Quick Test as accurate as a lab result.

- Easy to use - Results in 3 min
- High Sensitivity @ 25 mIU/mL
- Europe's no.1 trusted brand

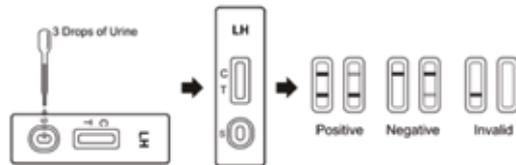

How does it work?

HCG Pregnancy Rapid Test Cassette detects a hormone in your urine that your body produces during pregnancy (hCG-human chorionic gonadotropin). The amount of pregnancy hormone increases as pregnancy progresses.

How accurate is the test?

A clinical evaluation was conducted comparing the results obtained using the HCG Pregnancy Rapid Test Cassette to another commercially available urine hCG test. The consumer clinical trial included 608 urine specimens: both assays identified 231 positive and 377 negative results. The results demonstrated >99% overall accuracy of the HCG Pregnancy Rapid Test Cassette when compared to the other urine hCG test.

HCG Pregnancy Rapid Test Cassette is a rapid, one-step lateral flow immunoassay in device format for the qualitative detection of human chorionic gonadotropin (hCG) in urine to aid in the detection of pregnancy.

The test utilizes a combination of antibodies including a monoclonal hCG antibody to selectively detect elevated levels of hCG. The assay is conducted by adding urine to the specimen well, and obtaining the result from the colored lines.

POSITIVE

Two distinct colored lines appear.

NEGATIVE

One colored line appears in the control line region (C)

INVALID

The result is invalid if no colored line appears in the Control Line Region

"Ovulation Test - giving an accurate and fast result.."

Intended Use

The LH Ovulation Rapid Test Midstream (Urine) is a rapid chromatographic immunoassay for the qualitative detection of luteinizing hormone (LH) in urine to aid in the detection of ovulation.

PRINCIPLE

Ovulation is the release of an egg from the ovary. The egg then passes into the fallopian tube where it is ready to be fertilized. In order for pregnancy to occur, the egg must be fertilized by sperm within 24 hours after its release. Immediately prior to ovulation, the body produces a large amount of luteinizing hormone (LH) which triggers the release of a ripened egg from the ovary. This is known as an "LH surge", and usually takes place in the middle of the menstrual cycle. It is during this fertile time that pregnancy is most likely to occur. It is important to note that an LH surge and ovulation may not occur in all cycles.

The LH Ovulation Test is a rapid lateral flow immunoassay for the qualitative detection of LH surges in urine, signaling that ovulation is likely to occur in the next 24-36 hours.

The test utilizes a combination of antibodies including a monoclonal LH antibody to selectively detect elevated levels of LH.

LH Ovulation Rapid Test Cassette (Urine)

The LH Ovulation Rapid Test Cassette (Urine) is a rapid chromatographic immunoassay for the qualitative detection of luteinizing hormone (LH) in urine to aid in the detection of ovulation.

Name: One Step Ovulation Test Cassette
Code: 7310010

SPECIMEN COLLECTION AND PREPARATION

- Determine the optimal time for urine collection. For best results, collect urine at about the same time each day. Some women have found that their best specimen is after 12 noon. Do not collect the first urine specimen after waking up
- Reduce liquid intake approximately 2 hours prior to urine collection.
- Record the date, cycle day and time of urine collection. See the TEST RESULTS CHART at the end of this package insert.
- Urine can be stored at room temperature for up to 8 hours or at 8-2° C for up to 24 hours. Do not freeze. For best results, test urine on the same day that it is collected. If refrigerated, let urine reach room temperature before testing. Do not shake the container. If a sediment forms at the bottom of the collection container, allow the sediment to settle. Use only urine from the top of the container.

Ovulation is the release of an egg from the ovary. The egg then passes into the fallopian tube where it is ready to be fertilized. In order for pregnancy to occur, the egg must be fertilized by sperm within 24 hours after its release. Immediately prior to ovulation, the body produces a large amount of luteinizing hormone (LH) which triggers the release of a ripened egg from the ovary. This "LH surge" usually takes place in the middle of the menstrual cycle. The LH Ovulation Rapid Test Midstream (Urine) is a complete system to help predict the time of ovulation, and peak fertility. It is during this fertile time that pregnancy is most likely to occur. The LH Ovulation Rapid Test Midstream (Urine) detects the LH surge in urine, signaling that ovulation is likely to occur in the next 36-24 hours. The test utilizes a combination of antibodies including a monoclonal LH antibody to selectively detect elevated levels of LH.

Important: The LH surge and ovulation may not occur in all menstrual cycles.

Accu-test

Stress free home sperm test. Indicates accurate normal or low sperm count.

Sperm Concentration Rapid Test Cassette

The Sperm Concentration Rapid Test is biochemical assay for in vitro qualitative estimation of sperm concentration in human semen as an auxiliary aid in clinical diagnosis of the infertility and/or pregnancy planning by self-evaluation of sperm concentration above or below the required concentration for successful pregnancy.

Preliminary screening of the sperm concentration

- **Easy to use - Results in 2-4 min**
- **Ultra High Sensitivity @ 15 million/mL**
- **Europe's no.1 trusted brand**

Name: Sperm Concentration Test - Home Sperm Test
Code: 731007

This product uses the inert glass fiber membrane with high water absorption and the pore size of less than 0.5µm to filter the semen. Sperm cells are trapped on the surface of the first layer of the membrane, and staining solution is used that can dye sperm cells. The darker the colour of Well A, the higher the sperm concentration. If the colour of test well A is lighter than the standard colour of reference Well B, it means that the concentration of sperm is less than 15 million/ml. If the colour of test well A is darker than the standard colour of reference Well B, it means that the sperm concentration is greater than 15 million/ml. Sperm concentration of 15 million/ml is the minimum expected sperm concentration level for pregnancy.

This kit is designed to be used for in vitro qualitative estimation of the sperm concentration of human semen. Essentially this means the test will determine if the number of sperms is at an adequate level for conception to occur with sexual intercourse, subject to female partner's ovulation in time. A low sperm concentration would indicate less likelihood of conception It would be advisable to see your medical professional who can advise what can be done to improve the sperm concentration.

FIA Biomed™ *Precisa*

Blood Glucose Monitoring System

Name: Blood Glucose
Monitoring System
Code: 1120001

FIA Biomed™ *Precisa* Blood Glucose Test Strip

Name: Blood Glucose Test Strip
Code: 1120002
Quantity/Pcs: 25 Strips

Each blood glucose test strip contains 1.5U Glucose dehydrogenase 0.08 mg of Potassium ferricyanide, and 0.07 mg of Non-reactive ingredients.

Performance Characteristics

Precision

Tests were carried by trained technicians in the laboratory setting. The venous whole blood from one subject was adjusted to 6 different levels. Strips out of a single lot were tested.

Accuracy

600 samples at glucose concentration 46~576 mg/dL were tested at hospital by healthcare professionals. Fresh capillary finger whole blood samples were tested with FIA Biomed™ System; plasma samples from the subjects were tested with YSI Model 2300 Glucose Analyzer as reference.

User performance

100 samples at glucose concentration 76~339 mg/dL were tested at hospital by lay user. 94.7% within ± 0.83 mmol/L (± 15 mg/dL) of the medical laboratory values at glucose concentrations below 5.55 mmol/L (100 mg/dL), and 100% within $\pm 15\%$ of the medical laboratory values at glucose concentrations at or above 5.55 mmol/L (100 mg/dL).

FIA Biomed™

Blood Glucose Monitoring System

Precisa

- *Less blood required*
- *Easy and fast*
- *Reliable result*

Name: Blood Glucose Monitoring System
Code: 1120001

Intended Use

FIA Biomed™ Precisa Blood Glucose Test Strips are biosensors only to be used with the FIA Biomed™ Precisa Blood Glucose Meter. It is designed to quantitatively measure the concentration of glucose in capillary and venous whole blood personally or by healthcare professionals for monitoring glucose at home or in healthcare facilities.

Glucose in the blood samples reacts with a special chemical in the test strip and produces a small electronic current. The amount of the current produced changes with the amount of glucose in blood. The glucose meter measures the strength of the current and displays the results as a blood glucose level.

ANTISEPTIC / DISINFECTANT / SANITIZING SOLUTION

Code: 1730139 Size: 2 Liters

SteriGuard has launched an anti-rust disinfectant for decontamination and cleaning of tools and implements in salons and beauty parlours.

PROTECTION

STERIGUARD Antiseptic / Disinfectant / Sanitizing Solution is a high grade SOLUTION that effectively fight contaminated surfaces with germs, viruses, fungi, and other pathogenic microorganism.

HOW TO USE: Add 100ml of SteriGuard for every 1 liter of water for safe use.

طريقة الإستعمال: يوضع ١٠٠ مل من الستييريغارد في
١ لتر ماء و يتم إستعماله كمعقم

WARNING AND PRE-CAUTION:

SteriGuard is high-grade disinfectant for professional use only and must handled with great care.

STERIGUARD is a germicide, fungicide, virucide and anti-rust disinfectant for decontamination and cleaning of all surfaces and tools.

Sterilizing Glass Jar

Code: 1730141

Specifications:

Width : 8.5 cm cm

Height : 23 cm tall

Capacity: 1200 ml.

Net weight: 433 grams

Purpose

- Ideal for use in salon or spa, medical facilities, and institutions.
- For disinfecting hairstyling tools, shears, immersible files, and longer grooming instruments.
- Custom molded glass with stainless steel parts.
- Fitted self-draining retrieval basket permits immersion and removal of tools without putting fingers in disinfectant solution.
- Lifetime guarantee against rust.
- Rubber ring at the base prevents jar from slipping and tipping.

Carefully Read Instructions of use indicated on the box and leaflet

GLUCONABIOMED

UNITED ARAB EMIRATES

Regulatory Guidelines - Medical Devices, General Sales List (GSL),
Vitamins/ Supplements, Herbal Medicines, Pharmaceutical Drugs

Prior to being sold in United Arab Emirates (UAE) Medical Devices, General Sale List (GSL), Herbals, Vitamins/ Supplements and Pharmaceutical Drugs must be approved from Ministry of Health and Prevention

There are 4 major steps involved in the approval process from Ministry of Health and Prevention.

step 1 Authorised Representative Services

Glucona Biomed offers Authorised Representative Services for your company in UAE

step 2 Classification of Products

Submission of classification forms, follow up with Ministry of Health

Glucona Biomed offers expert guidelines and services for classification of products in Ministry of Health.

step 3 Site or Manufacturing Unit Registration

Technical regulatory file review, file submission, certificate collection

Glucona Biomed regulatory affairs and registration officers ensure timely delivery of site registration.

step 4 Product Registration

Regulatory file review, file submission, laboratory test or any test requirement by Ministry of Health, certificate collection.

Glucona Biomed regulatory affairs and registration officers ensure timely delivery of product registration.

Note:

Classification is necessary only in case the planned product's classification is not 100% clear for our expertise.
